South Dakota Scope of Practice Guide for Advanced Life Support Personnel

EMT I/85, EMT-A, EMT I/99, EMT-P

Approved by the South Dakota Board of Medical & Osteopathic Examiners June 14, 2018

AAOS AMERICAN ACADEMY OF ORTHOPAEDIC SURGEONS
AMERICAN ASSOCIATION OF ORTHOPAEDIC SURGEONS

In 1971, the AAOS published the first emergency medical technician (EMT) textbook, <u>Emergency</u> <u>Care and Transportation of the Sick and Injured</u>, and laid the foundation for emergency medical services (EMS) training.²

Emergency Medical Technician - Paramedic	Page	15
All levels	Page	20

This booklet contains the scopes of practice for advanced life support (ALS) personnel in South Dakota. In order to work at any level of ALS, the individual must be licensed by the South Dakota Board of Medical and Osteopathic Examiners (SDBMOE). All ALS training programs must be approved in advance by the SDBMOE.

A South Dakota licensed physician medical director may limit the scope of practice/skills for any level of ALS personnel; however, the physician medical director may not expand the scope. All changes to any of the scopes of practice or skills must be approved in advance by the SDBMOE.

In South Dakota there is an emergency medical technician-student status level (EMT-SS) for individuals enrolled in ALS training programs.

The four advanced life support (ALS) license levels are as follows:

- emergency medical technician-intermediate/85 (I/85)
- emergency medical technician-advanced (EMT-A)
- emergency medical technician-intermediate/99 (I/99)
- emergency medical technician-paramedic (EMT-P)

The scope of practice for each level is part of a sequence that starts with the scope of an emergency medical technician (EMT). Then, each ALS license level is built upon the knowledge, skills, and competencies of the lower levels:

- the I/85 must meet all of the competencies of an EMT, as well as those specific to the entrylevel I/85
- an EMT-A must meet all of the competencies of an EMT, and the I/85, as well as those specific to entry-level EMT-A
- an I/99 must meet all of the competencies of the EMT, I/85, and EMT-A, as well as those specific to entry—level I/99
- an EMT-P must meet all of the competencies of the EMT, I/85, EMT-A, and I/99, as well as those specific to entry –level EMT-P

ALS personnel must work under direct supervision of a South Dakota licensed physician except when responding to emergencies when they are allowed to work under protocols and indirect medical supervision. They can work on an ambulance service or in a facility licensed by the South Dakota Department of Health under SDCL 34-12, where they must be under direct supervision of a South Dakota licensed physician at all times. This typically takes place in the emergency department of a licensed facility.

A South Dakota facility licensed under SDCL 34-12 may limit the scope of practice/skills for any level of Advanced Life Support (ALS) personnel; however, they may not expand the scope. All changes to any of the scope of practice or skills must be approved by the SDBMOE.

EMT Scope of Practice
Airway / Ventilation / Oxygenation
Airway - Mouth-to-Mouth
Airway - Mouth-to-Barrier
Airway - Mouth-to-Mask
Airway - Mouth-to-Nose
Airway - Mouth-to-Stoma
Airway - Nasopharyngeal
Airway - Oropharyngeal
Airway - Supraglottic Airway Device
Airway Obstruction - Manual
Head-Tilt / Chin-Lift
Jaw-Thrust
Jaw-Thrust - Modified
Bag Valve Mask (BVM)
CPAP
Capnography - End Tidal CO2 Monitoring
Chest Seal
Cricoid Pressure (Sellick)
Manual Airway Maneuvers
Oxygen Therapy - Tracheal Tube
Oxygen Therapy - Nebulizer
Oxygen Therapy - Nasal Cannula
Oxygen Therapy - Non-Rebreather Mask
Oxygen Therapy - Simple Face Mask & Partial NRB
Oxygen Therapy - Venturi Mask
Oxygen Therapy - Humidified
Pulse Oximetry
Suctioning - Upper Airway (soft & rigid)
Ventilators - Automated Transport Ventilator
·
Assessment Skills / Miscellaneous
Perform Patient Assessments
Obtain Vital Signs Manually or Electronically
Pulse Oximetry
Obtain Temperature
Obtain & Measure Blood Glucose
Assisted Delivery (Childbirth)
Eye Irrigation (Non Invasive)
Patient Physical Restraint Application
- utility in your restraint rippineation
Cardiovascular / Circulation
12, 15, or 18 Lead EkG transmission (Mission LifeLine)
Cardiopulmonary Resuscitation (CPR)
Use of mechanical CPR Assist Devices
Defibrillation - AED
Hemorrahage Control Products
Hemorrhage Control - Direct Pressure
Hemorrhage Control - Pressure Point
Hemorrhage Control - Tourniquet

Trauma Care

Spinal immobilization - Cervical Collar

Spinal Immobilization - Long Board

Spinal Immobilization - Manual Stabilization

Spinal Immobilization - Seated Patient (KED, etc.)

Spine Motion Restriction

Splinting - Manual

Splinting - Pelvic Wrap / PASG (Only used for Splinting)

Splinting - Rigid

Splinting - Soft

Splinting - Traction

Splinting - Vacuum
